

PRAVEEN KUMAR GOSWAMI

Software Engineer | AI/ML Engineer

Chennai, India | [Phone] | [Email] | [LinkedIn] | [GitHub]

PROFESSIONAL SUMMARY

Software Engineer and AI/ML enthusiast with a strong foundation in Python, machine learning, software development, data structures, and full-stack application development. Experienced in building AI-powered applications integrating machine learning models, APIs, databases, computer vision, speech technologies, and web/mobile interfaces. Passionate about practical AI, healthcare technology, research, and innovation.

TECHNICAL SKILLS

- **Programming:** Python, JavaScript, Kotlin, HTML, CSS
- **AI / Machine Learning:** Machine Learning, AI Model Development, Computer Vision, AI-powered Applications
- **Software Engineering:** Data Structures & Algorithms, REST APIs, Application Development, Full-Stack Development
- **Web:** Flask, HTML, CSS, JavaScript
- **Mobile:** Android / Kotlin, Mobile Application Development
- **Databases:** MySQL, MongoDB, Firebase
- **Other:** Git/GitHub, API Integration, Problem Solving

PROJECTS

AI-Powered Study Companion

- Developed an AI-powered study assistant integrating conversational AI with a web-based interface.
- Implemented Python components for AI input/output, speech recognition, text-to-speech, and camera-based interaction.
- Integrated Flask with HTML, CSS, and JavaScript to create an interactive application.
- Explored computer-vision-based interaction including facial detection, blinking, and smiling detection.

Career Path Predictor with Industry Alignment

- Developed an AI-powered career guidance platform designed to analyse academic performance, personal interests, and industry requirements.
- Built a Flask-based application with authentication, AI chat functionality, personalised recommendations, and career-professional meeting scheduling.
- Integrated Firebase and API-based services to support application functionality.
- Designed the system around AI-assisted career recommendations and industry-aligned upskilling pathways.

Device Control Through Eye Movement

- Developed a computer-vision-based assistive technology concept for controlling devices through eye movement.
- Explored camera-based detection and human-computer interaction techniques.
- Focused on accessibility and hands-free device control for users with mobility limitations.

Healthcare Mobile App

- Developed a healthcare-focused mobile application concept using modern application-development technologies.
- Designed the application around accessible healthcare interaction and digital health services.
- Worked with mobile development, APIs, databases, and user-facing application functionality.

HACKATHONS & INNOVATION

TECH4LIFE 2026 — Medical Devices Hackathon | Team: CODE MARROW

- Participated in a healthcare innovation hackathon focused on medical devices, diagnostics, patient access, health data, assistive technology, and public health.
- Worked on technology-driven healthcare solutions combining software, AI/ML, embedded systems, and assistive technology.
- Explored smart wound monitoring and connected medical-device concepts.

Awards: Best Innovation • Best Presentation

EDUCATION

Bachelor of Computer Applications (BCA) | 2023 – 2026

Master of Computer Applications (MCA) | 2026 – 2028 | Pursuing

CORE STRENGTHS

Python & AI/ML Development • Software Engineering • Machine Learning Applications • Problem Solving & DSA • Full-Stack Application Development • Computer Vision • API & Database Integration • Healthcare Technology • Rapid Prototyping • Research & Innovation
